

Wein-Protector inkl. 4 Kapseln

Protective Gas

Art. nr. 80331000

Using the Wine Protector is the simplest and safest way to preserve your opened wine. At the touch of a button, inert gas flows from the cylinder fitted with a nitrogen oxide capsule into the wine bottle. This odourless and tasteless gas is heavier than air, thereby covering the surface of the wine and ensuring that contact between wine and air is prevented. Oxidation of the wine is now impossible. Once the capsule is depleted after 30 to 40 applications, it can be easily replaced.
